September 2, 2009

Mr. Jim Brown
Alaska Copper Works
3200 6th Avenue S
Seattle, Washington 98134

**RE: Washington State Pollution Prevention Plan Update
2008 Plan Update Submission Notice**

Dear Mr. Brown

Please find the enclosed electronic copy of the Pollution Prevention Plan update for year ending 2008 and submitted on your behalf to the Washington Department of Ecology.

No signature is necessary. This is only an update to the 5 year plan originally submitted in base year 2006.

Retain this copy for your records.

This satisfies Washington State P2 plan update submittal requirements for the year 2008.

The next update for 2009 is due September 1, 2010.

You may wish to review the update to determine if your waste reduction objectives are in line with your expectations.

Please feel free to contact me any time should you have questions regarding the information contained in the updated plan, how to further reduce hazardous waste generation, or to learn more about State and Federal waste reduction training and informational programs.

Sincerely,

Matthew Dunn
(b) (6)

Pollution Prevention Plan Update 2008

Facility Name: Alaskan Copper Works

Industry Type: Fabricated Pipe and Pipe Fitting Manufacturing

NAIC Code: 332996

EPA ID# or CRK#: WAD980738546

Base Year: 2006

Description of Products and Services

Full service center and manufacturer of corrosion resistant alloy products.

Production Level

Units	2006	2007	2008	2009	2010	2011
Lbs of material processed	29,210,133	31,230,000	10,421,732	0	0	0
Ratio	1.00	1.07	.35	0.00	0.00	0.00

Previous Accomplishments

Metal Fab Processing

2007-2008

Chrome slag toxicity reduction: Chrome slag generated from plasma table cutting processing was subjected to an on site pilot test program started in mid 2007 with actual on site hazardous characteristics reduction treatment occurring in early 2008 resulting in 100% chrome slag toxicity reduction. For the calendar year of 2008 dangerous waste reduction occurred under treatment by generator provisions but still had to be reported due to treatment outside of process and lack of local recycling disposition outlets. As of 2009 treatment will be conducted within the process so that no dangerous waste generation will occur from this process.

Pipe Painting

2007-2008

Opportunity originally identified in 2001 by using smaller amounts of solvents to clean parts; only using what is needed subject to fluctuating annual production demand. An estimated 61% total solvent use reduction established at end of 2002. Currently only small amounts of solvent in the form of spray marking paints, dyes, and parts cleaning solvents are purchased and used as needed keeping hazardous materials inventory to a minimum. All used solvents and spray cans are dispensed, containerized and added for off-site solvent fuels program

Materials account/mgmt

2007-2006

Initially started in 2002, material purchasing tracking by accounting helps to account for all material purchased and combined with the annual waste report provides a complete use and disposal tracking mechanism to view overall hazardous material control throughout all portions of manufacturing.

Pollution Prevention Training

- New employee orientation training is provided to employees emphasizing the company environmental policy, hazardous materials and waste management procedures, pollution prevention techniques and goals, and emergency response training.
- Annual employee refresher training highlighting proper hazardous materials handling, use and storage, waste reduction assessment techniques, proper waste management procedures and related subjects, pollution prevention principles, and company environmental policies and management systems.
- Waste management issues are addressed during safety meetings.
- Open-door policy regarding safety and environmental concerns to their supervisors, who in turn bring these concerns to the Operations Manager for review and implementation.
- Promotion of employee involvement in environmentally friendly practices.
- Contracting outside environmental management firm to assist in pollution prevention planning and provide new technologies for waste reduction or product substitution.
- For 2008 additional stormwater management training has been incorporated into the new hire and annual refresher training program

Employee Involvement

Operations Manager (James Brown): In charge of overall P2 Plan; coordinates management policies, project support, technical and economic evaluations; implements pollution prevention in all areas of the facility; ensures design modifications are made to reduce pollution impact.

Plan Contact: James Brown, Operations Manager; Shawn Estrada, Clean Harbors Environmental Services.

Cost Accounting

Currently, environmental costs are placed into the category of overhead. Our accounting system has been identified as an opportunity to track costs more easily and will be assessed in the near future.

Five-Year Numeric Performance Goals

Goals for the 5-year life of this plan.	2007	2008	2009	2010	2011
Hazardous Substance Use Reduction (lbs)	100	100	100		
Hazardous Waste Reduction (lbs)	25000	26000	32000		
Hazardous Waste Recycling (lbs)	25000	26000	32000		
On-site Hazardous Waste Treatment (lbs)	25000	26000	32000		
Wastewater Reduction (gal)					
Energy Conservation (kWh)					
Cost Savings (\$)					
Air Emissions Reduction (lbs)					
Solid Waste Reduction (lbs)					
CO2 Emissions Reduction (lbs)					

Non-Numeric Performance Goals Hazardous waste reduction has been achieved by better waste dewatering processing and implementation of specific waste stream on-site treatment and process waste neutralization. As a result of new treatment technologies, hazardous waste recycling goals will adjust proportionally since generated hazardous waste will be rendered non-hazardous with resulting waste shipped for recycling or beneficial use. There should be no increase in volume of water use as a result on site treatment and neutralization.

Management Policy

Establishing and maintaining environmental policies that promote better hazardous material and waste handling and safer workplace will continue to be a paramount priority. Since the introduction of an independent consultant, we have increased our understanding and have addressed a number of hazardous management issues in the workplace and will continue to improve on our overall management plan. Our organization is committed to the purpose of this plan and hereby submits it to the Department of Ecology.

James Brown
Operations Manager 9/1/2009

Processes and Opportunities

Process	Opportunity
Metal Fab Processing GoTo	Chrome slag toxicity reduction GoTo Chrome toxicity reduction GoTo
Pipe Painting GoTo	Ship paint waste to off-site recycling facility GoTo Continuing employee training to conserve use of solvents GoTo Incorporate the use of less toxic or bio degradable paints and dyes
Passivating Process GoTo	Application of spray rinse and vapor controls to reduce evaporation and nitric acid use GoTo
Enter New Process Name	

Process	Metal Fab Processing	TOP	Help
---------	----------------------	-----	------

DESCRIPTION: Stainless steel sheet and plate products are used to produce pipe fittings. Sheets are tolled into pipe which are welded, x-rayed, inspected, passivated (explained on separate process description form), and shipped.

RE: Alaskan Copper Works Tier II Report for 2006

Romic Environmental Technologies, Corp. (ROMIC) as been retained by Alaskan Copper Works, Inc. located at 3200 6th Avenue S in Seattle, Washington 98134 to provide SARA Title III reporting services.

Under §312, this report reflects updated average and maximum hazardous chemical inventories located at the above address for the calendar year 2005 and likely inventory quantities for 2006.

All questions or inquiries in addition to future Tier II reporting notifications for Alaskan Copper Works, Inc. should be addressed to Matthew Dunn at (b) (6) or write to:

RE: Tier II Reporting Action Notification

Dear Mr. Brown,

ROMIC requests a site visit sometime between March 1 and March 3, 2006.

ROMIC can accommodate any day during the week that best suits your convenience.

The purpose of this visit is to confirm existing hazardous material storage locations and inventory. Information gathered from this site visit will be used to comply with Tier II reporting requirements under SARA Title III Section 312. The report is Due March 15, 2006 and will be submitted to Local Emergency Planning Committee (LEPC), and the local fire department. A copy of the report will be mailed to you for your records. ROMIC will also maintain a copy of the report for a period of 5 years.

I will contact Mr. Gerald Thompson on the morning of February 29 to confirm an appropriate time.

The site visit should take approximately 2 hours. I will be bringing out a local ROMIC technician, who will be substituting for me during the last half of March and early April, 2006. This will also be an opportunity for the local ROMIC field office to assume a portion of future reporting services. This step will help promote timely service.

Please feel free to contact me at (b) (6)

Sincerely,

A handwritten signature in black ink, appearing to read 'Matthew Dunn'.

Subject: FW: Request for information

Jerry, here is the information I was able to get from Mathew per the meeting we had. Unfortunately some of the information you are looking for was passed on to Scott and Jason when Mathew transferred to another division, and the information was not passed along after they moved on. Please let me know if there is anything else I can help with. The last paragraph in Mathews comments pertains to the burn tables, and we have already passed this information along to you. Thank you and have a great day.

Subject: RE: Request for information

Clean Harbors has very little information prior to 2007. Previous work was done by ROMIC and whatever we have in the hard file you gave them is all there is.

I have attached all I have.

Any past Tier two reports should be with ACW. I forwarded my only copies to ACW and to Jason and Scott St. John when I transferred to another cost center. However ACW at both locating did not have inventories in quantities subject to Tier 2 reporting for 2007 or 2008.

We did not submit form R's since our inventory check showed that ACW in Seattle or Portland did not purchase or generate sufficient quantities for reportable substances under 313.

All previous year Annual Waste Reports can be accessed on-line through turbo-waste. We access any additional copies through this on line service. I have attached some additional electronic copies from last year but really anyone can get previous year information by getting the password from Jim Brown.

With respect to the TUHWR, this is not required for Oregon after 2007 since the ACW Portland facility has been reporting as an exempt quantity generator.

V can not divulge the treatment process itself as this is proprietary. With respect to a WAP, which we invoked a trade secret to, we provided this to ACW and I transferred my files to Jason and Scott St John once I moved to another cost center. I do know that DOE has a copy of this as well since they approved the plan when we started the process.

Subject: Request for information

Good afternoon Mathew, today Tom and I met with Alaskan Copper and Brass Jerry Thompson and his new regulatory consultants Piper Roelen with Landau Associates and John Souza with KTA. John was going through the reporting records and was looking for some information. I gave Jerry copies of the binders that we have in our office that pertained to their information. John and Jerry went through the binders and said the needed some information, specifically they are looking for:

Tier 2 reports for 2007 and 2008
Form R's for 2006, 2007, and 2008
And the annual waste report for 2007

John had also brought up that they were looking for the TUHWR, Oregon's version of the Pollution Prevention Plan, from 2006 to current

They were also looking for any correspondence with the DOE regarding the treatment of the burn table slag, they were also asking if we had a WAP for this.

Thank you for your help and please let me know if there is something I can do to help pull all of this together.

RECYCLABLE MATERIAL PROFILE

EXHIBIT A

Generator Name: Alaskan Copper Works

Company I.D. #: 22149-001-01

A. Generator Information

1. Address: 3200 Sixth Avenue South
Seattle
WA 98124

2. Contact: Gerald Thompson
Title: Environmental Assistant

3. Material EPA Waste Code: F006

4. Generator's EPA I.D. Number: WAD980738546

5. Generator's State I.D. Number:

B. Recyclable Material Characteristics

1. Color(s): Brown	6. Texture (similar to)	7. Appearance	9. Free Liquids (EPA SW 846, Method 9095)
	<input checked="" type="checkbox"/> Wet Clay <input type="checkbox"/> Dry Clay <input type="checkbox"/> Sand <input type="checkbox"/> Powder <input type="checkbox"/> Other	<input checked="" type="checkbox"/> Homogenous <input type="checkbox"/> Bilayered <input type="checkbox"/> Multilayered	<input checked="" type="checkbox"/> Not Present <input type="checkbox"/> Present
2. Odor (none,mild,strong) None Description of Odor:			10. Debris <input checked="" type="checkbox"/> Not Present <input type="checkbox"/> Present
3. Moisture (wet,damp,dry) Wet Percent Solids: 21.7	8. Organic Vapors <input checked="" type="checkbox"/> Not Present (< 1ppm) If present, identify compounds and amount in ppm on a wet basis.	<input type="checkbox"/> Present	11. Reactivity <input checked="" type="checkbox"/> Not Reactive <input type="checkbox"/> Reactive
4. pH (EPA SW 846, method 9040/9045) pH: 8.73 @ 19.8°C	5. Ignitability (40 CFR §261.21) <input checked="" type="checkbox"/> PASS <input type="checkbox"/> FAIL	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	12. Radionuclides (ASTM D5928-96) <input checked="" type="checkbox"/> Not Detected <input type="checkbox"/> Detected
			13. Cyanide Gas HCN <input checked="" type="checkbox"/> Not Detected <input type="checkbox"/> Detected ppm

C. Analytical Data (Content on a dry weight basis in ppm or %)					
Constituent *	Content	Qualifier	Constituent *	Content	Qualifier
1. Aluminum ¹	Al 10006.8 ppm	M3	19. Magnesium ¹	Mg 3405.3 ppm	
2. Antimony ^{1,t}	Sb 21.6 ppm	M2	20. Manganese ¹	Mn 6720.9 ppm	
3. Arsenic ^{1,t}	As 68.2 ppm		21. Mercury ¹	Hg < 3.3 ppm	
4. Barium ^{1,t}	Ba 119.6 ppm		22. Nickel ^{1,t}	Ni 56421.2 ppm	
5. Beryllium ^{1,t}	Be < 10.0 ppm		23. Selenium ^{1,t}	Se < 50.0 ppm	
6. Bismuth ¹	Bi 99.9 ppm		24. Silver ^{1,t}	Ag < 5.0 ppm	M2
7. Cadmium ^{1,t}	Cd < 20.0 ppm		25. Thallium ^{1,t}	Tl < 20.0 ppm	
8. Calcium ¹	Ca 15688.1 ppm		26. Tin ^{1,t}	Sn 136.5 ppm	
9. Chloride ⁴	Cl ⁻ 0.24 %		27. Zinc ^{1,t}	Zn 908.3 ppm	
10. Chromium, Hexavalent ²	Cr +6 3146.2 ppm				
11. Chromium, Total ^{1,t}	Cr 52088.2 ppm				
12. Cobalt ¹	Co 787.5 ppm				
13. Copper ^{1,t}	Cu 27274.3 ppm				
14. Cyanide, Amenable ^{3,t}	CN ⁻ not analyzed				
15. Cyanide, Total ^{3,t}	CN ⁻ < 46.1 ppm	Z2, Z3			
16. Fluoride ⁴	F ⁻ 0.52 %				
17. Iron ¹	Fe 274339.0 ppm				
18. Lead ^{1,t}	Pb 97.3 ppm				

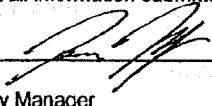

* Analytical Procedure References

- EPA Method SW846 3050 / 6010 (Digestion / Analysis)
- EPA Method SW846 3060 / 7196 (Extraction / Analysis)
- EPA Method SW846 9010 / 9213 or 9014 (Distillation / Analysis)
- HNO₃ or H₂O₂ / EPA Method SW846 9056 (Digestion / Analysis)
